

LEARNING TO LEARN

WHAT IS IT ABOUT?

Becoming a super learner is one of the most important skills you need to succeed. Organisations today are in constant flux. Industries are consolidating, new business models are emerging, new technologies are being developed, and consumer behaviours are evolving.

For individuals, staying ahead and remaining relevant in the changing workforce, depends on continual self-education - a lifelong mastery of new models, skills and ideas.

“For organisations, the ability of its people to learn faster than their competitors may be the only sustainable competitive advantage.”

(Arie P. de Geus)

twyla

WHAT WILL YOU LEARN?

- Discover how to use tools drawn from neuroscience to enhance learning
- Become aware of learning techniques used by experts in art, music, literature, math, science, sports, and many other disciplines
- Explore simple mental models and tools to boost key mindsets and attributes to become a continuous and effective learner
